

ON-DEMAND WEBINAR

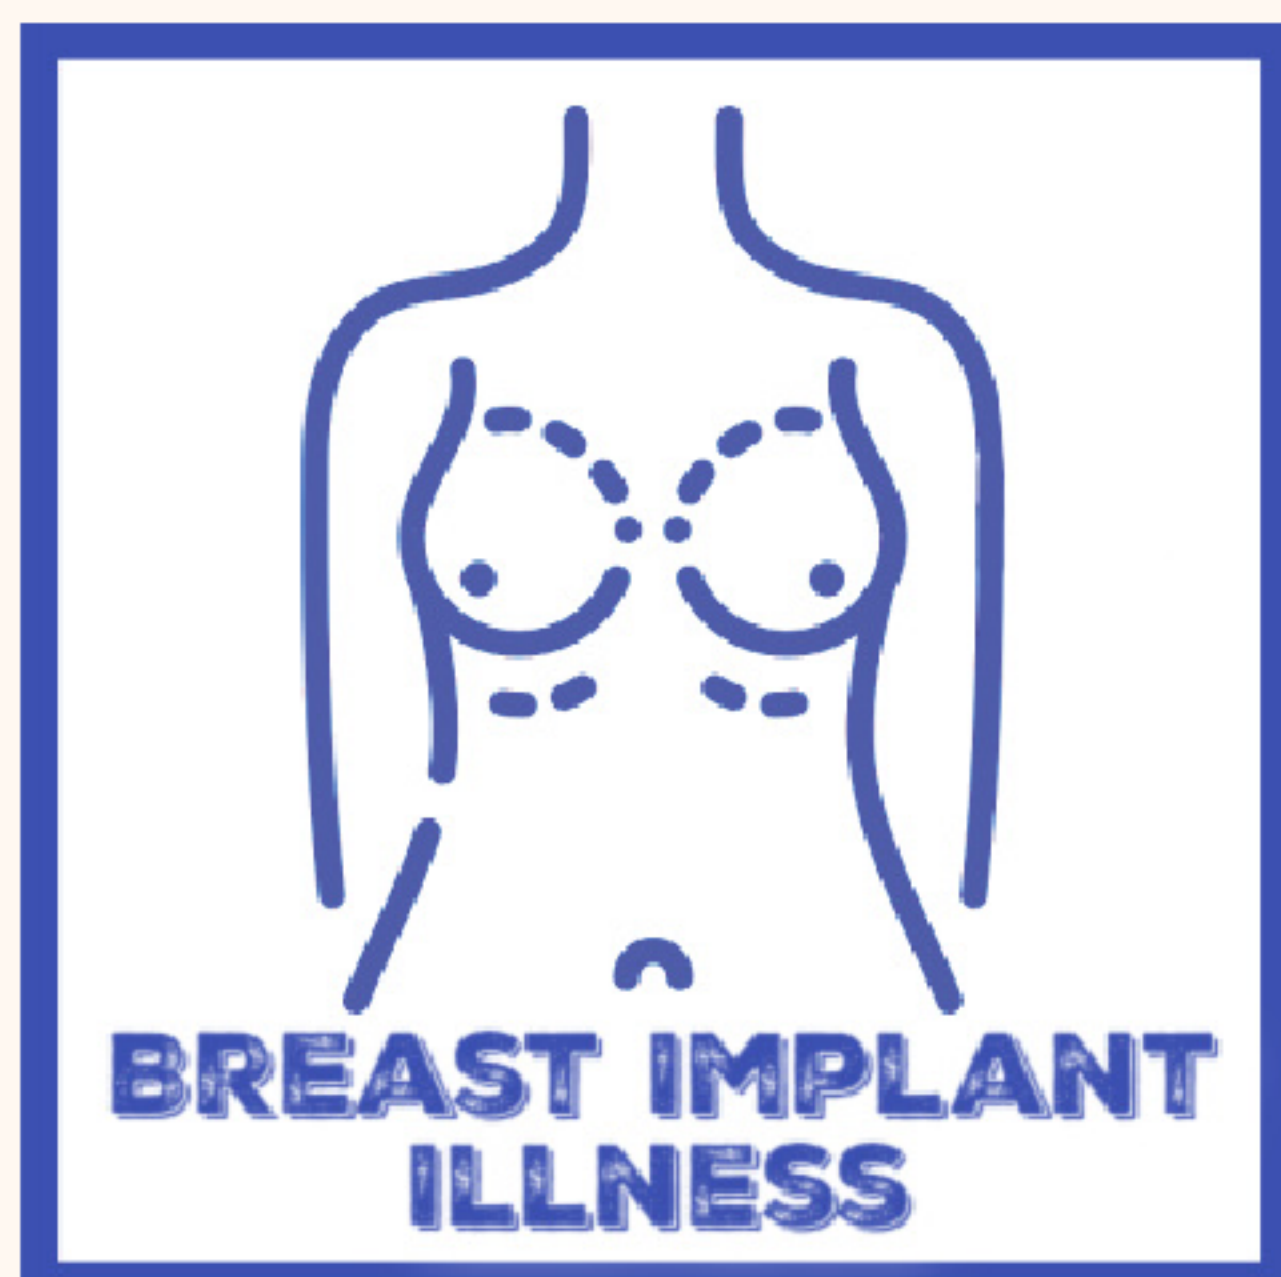

Breast Implant Illness

Dr. Jill R. Schofield,
MD

Description:

Breast Implants are one of the most frequently performed cosmetic procedures in Canada each year. Breast implant illness (BII) is a term that refers to a range of symptoms that can develop after undergoing reconstruction or cosmetic augmentation with breast implants. BII isn't well understood, but appears to be related to an autoimmune reaction to the implants. Patients can suffer from a number of confounding and frustrating symptoms, as they struggle to identify the cause. BII can occur with any type of breast implant, including silicone gel-filled, saline-filled, smooth surface, textured surface, round, or teardrop-shaped implants. Join our expert **Dr. Jill Schofield** who will discuss our current understanding of BII, the constellation of symptoms, and what the most current research indicates. She'll also discuss risk factors for BII and potential treatments.

Includes:

- 2 hours of Continuing Education
- On-Demand Access for at Least a Year
- Certificate of Completion
- PDF handouts to view or print
