ON-DEMAND WEBINAR

Secondary Diabetes

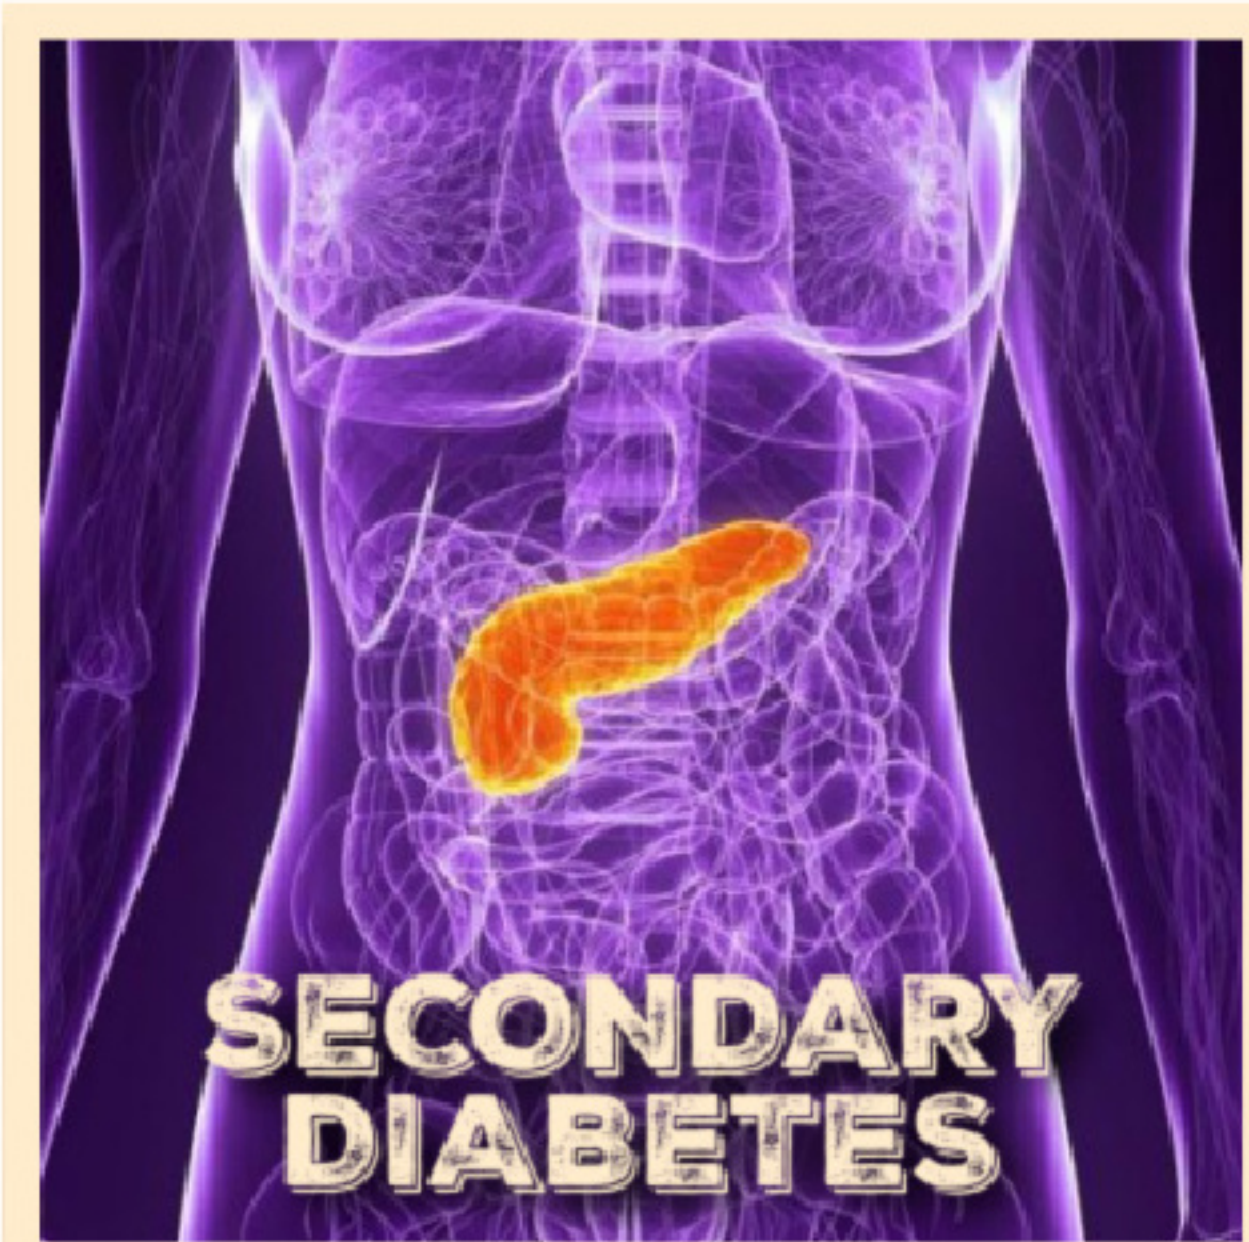

Barb Bancroft,
RN, MSN, PNP

Objectives

At the conclusion of the presentation learners will be able to:

- Identify at least 5 diseases of the pancreas that destroy the pancreatic beta cells and can cause secondary diabetes.
- Identify other diseases that involve central mechanisms of glucose control including mental health disorders
- Identify at least 6 hormonal syndromes that cause peripheral insulin resistance
- Identify at least 8 categories of medications that can cause secondary diabetes; and problematic dosages of certain medications.
- Understand the impact of stress; discuss hyperglycemia and the hospitalized diabetic and non-diabetic patient
- Identify appropriate diagnostic tests and treatment of secondary diabetes.

Includes:

- 2 hours of Continuing Education
- On-Demand Access for at Least a Year
- Certificate of Completion
- PDF handouts to view or print

\$39 + GST
